

RiskProfiler Wireframes v2.0

Notes for March 29, 2020

GotHub Files:

- **RiskProfiler-wireframes-v2.0.pdf:** Contains an updated site map and a composite set of wireframes developed by Maverin and NRCan teams. Please see PDF notes for feedback on existing wireframes.
- **SVG Folder:** Contains vector graphics files for **MyRisk, Hazard Threats, Community Profile, Earthquake Risk and Risk Metrics** pages. Sidebar graphics files for each of these pages can be imported into Adobe to access icons and logos. Please use these icon graphics if possible, as they provide continuity with content developed for other related media projects (reports, presentations).
- Please use the NRCan wireframes as a reference for User Interaction functions.
- NRCan team has modified Web Mapping page layout to provide additional space for side bar charts. Panel below the main map frame is reserved for map legend information, which will be contained in a translucent pop-up window.
-
